# METHODOLOGY

## COMPETITION

$$cq = lerp\left(\frac{c_I}{c_T}, 1, 0.2\right)$$

The number of companies in the industry operating within the state, divided by the total number of companies operating in the state, linearly interpolated toward 1 by 0.2

## PRICE

$$pq = lerp\left(0, 0.5, \frac{r_s}{r_n}\right)$$

Zero linearly interpolated toward 0.5 by the average rent in the state divided by the average rent nationwide

## Population

$$popq = \frac{d_s}{md_n}$$

The population density of the state divided by the maximum population density of any state, nationwide (excluding DC)

## SPACE

$$sq = lerp\left(\frac{sp_s}{msp_n}, 1, 0.2\right)$$

The average space available for lease in the state, divided by the maximum space available to lease nationwide, linearly interpolated toward 1 by 0.2
